PROFILE

Energetic and adaptable Software Development student with strong experience working in Agile/Scrum teams across multi-semester projects. Particularly interested in Technical Program Management, UX-driven development, and cross-functional collaboration between engineering and design. Experienced in translating requirements into executable plans, coordinating team delivery and supporting the full software development lifecycle in academic and Erasmus-funded projects.

TECHNICAL SKILLS

Tools & Practices	Strong Agile / Leadership/ Scrum Practices, Git, Requirements breakdown, Sprint planning
Languages	Java, Python, C#, Javascript, C++, PHP, Kotlin,
Frameworks & APIs	ASP.NET Core REST APIs, HTTP, JSON HTML, CSS/SCSS
Databases	SQL, MongoDB
Frontend & UX	UI/UX design principles, Mobile-first & accessibility-aware design

EDUCATION

Dundalk Institute
of Technology
(Present)

BSc. Honours In Computing in Software Development (Level 8)
(Expected to Graduate 2026)

Key Modules

- Artificial Intelligence
- Full-Stack Development
- Cyber-Security
- UI/UX Design
- Algorithms and Data Structures
- Mobile App Development
- Data Science
- IoT Development

PROJECTS

AI Mould Detection App - Final Year Group Thesis

“SPOREX” - Scrum Project Manager, Front-end Developer , UI/UX Designer

Contributing to the development of **SporeX**, a Mould detection mobile application that uses image recognition to identify Mould presence in homes & public spaces built with Java/Kotlin in Android Studio.

- Leading the **front-end development**, focusing on creating a clean, responsive and user-friendly interface. Collaborating with team members to design the system architecture and plan integration between front-end and back-end components.
- Led front-end and UI/UX design, ensuring technical feasibility aligned with user experience requirements.
- Led sprint planning, backlog prioritisation, task estimation and sprint reviews for a multi-disciplinary development team.

PROJECTS

Immersive Virtual Reality Experience - Erasmus Project

Unity Developer & Narrative Designer | **6-Month Erasmus**
Collaborative Project

Developed a collaborative VR experience using **Unity** and **C#** using the **Meta Quest 3** with High-Definition Render Pipeline (HDRP) for high visual development. Led UX design efforts, sourced and integrated 3D assets, and crafted immersive narrative and dialogue.

- Coordinated development tasks across a multidisciplinary international team, many of whom were non-developers.
- Acted as a bridge between technical implementation and creative/narrative requirements.
- Managed scope, asset integration, and iterative delivery under time constraints.

Style Recommendation API – Individual Project

Built a Style Recommendation API that recommends outfit items based on the weather by integrating with an ASOS product API enabling intelligent, real-time fashion suggestions with filter options.

- Designed and implemented RESTful endpoints using ASP.NET Core, handling data retrieval, filtering and recommendation logic.
- Developed a custom recommendation engine that matches user-stored wardrobe items with external ASOS products for cohesive outfit pairing.
- Used Entity Framework for data persistence, applied migrations and maintained a clean and scalable database schema.
- Independently scoped, planned, and delivered a full-stack project using iterative development and version control best practices.

ACHIEVEMENTS

February - 2024

Lens, France

e.COAL Project 2024

***Erasmus+** Funded intensive app development coding project*

‘YumYum’ Food Newspaper Application – [Github Link](#)

- **Privileged to have been personally selected** for this program, I collaborated with a diverse team of developers to successfully develop an online newspaper web application focused on short articles on various topics in **React**.
- Implementing user features for registered and guest access, prioritizing user engagement and created a tagging system to facilitate article search functionality. Adopted a **mobile-first design** approach for enhanced usability.
- Utilized **Laravel** framework for backend operations and seamless **restful API** integration, alongside **Node.js** for enhanced server-side capabilities.

INTERESTS / SOCIETIES / WORK

Founder & Chairperson – *DKIT Fashion Society, Led **planning** and communication for society initiatives, balancing creative direction with logistics, **Member of** Google Society at DKIT*

Interests - Event-Management, Graphic Design, UI/UX Design, Programming, Video Editing, Game Development, Web Development

Work: Retail Assistant at **Primark**, **2+ Years**, Steward at Aviva Stadium

Developed strong communication, time management in a fast-paced environment.
